OBJECTIVE

To develop a strong foundation in backend engineering and distributed systems to build production-grade financial features. Passionate about designing highly scalable microservices, reliable RESTful APIs, and secure data flows that deliver real-world impact. Eager to contribute to an agile engineering culture that prioritizes clean code, system reliability, and continuous learning.

EDUCATION

Bachelor of Information Technology, University of the West of England

Expected May/2026

Relevant Experience: Team leader for course projects in Web Application Development and Software Engineering

SKILLS

Languages and Frameworks

- **Languages:** Java, TypeScript, JavaScript.
- **Frameworks & Libraries:** Spring Boot, Vue.js 3, React, Node.js/Express.
- **Databases & Big Data:** Relational Databases (PostgreSQL, MySQL), SQLite, MongoDB.
- **Tools & Architecture:** Git, Docker, Microservices Architecture, RESTful APIs.

CERTIFICATES

IELTS Academic

August/2025

Overall Band: 7.0

EXPERIENCE

Full-stack developer Intern

Feb/2025 - June/2025

AQTech

Ho Chi Minh City

Frontend and AI Developer Intern (Part-time)

- **Details:** Contributed to educational web platforms using **React** and proactively developed **internal automation tools** to optimize team operations.
- **Achievement & Responsibilities:**
 - **Internal Automation (Team size: 2):** Collaborated with another intern developer to build an **automated intern attendance tracking application** and a **dynamic dashboard** to manage employees using **n8n**. Significantly improved management efficiency and saved time for the Team Lead by eliminating manual tracking.
 - Proactively built an **AI chatbot** to automate daily task reporting and explored **external AI APIs** for further system integrations.
 - Self-taught **UI design principles** to independently align frontend coding with product goals and improve interface appeal.
- **Tech stack:** React, JavaScript, HTML/CSS, TanStack Query, MySQL, Swagger, n8n Automation, OpenAI API.

Full-stack developer Intern

Jan/2024 - Apr/2024

EdunetJSC

Ho Chi Minh City

Full-stack Developer and AI Intern (Part-time)

- **Details (Team size: 4):** Collaborated in a **cross-functional team** to develop a commercial EdTech product under the mentorship of PhD. Diep Ho. Roles were **dynamically rotated** among members to maximize full-stack learning and system understanding.
- **Achievement & Responsibilities:**
 - **Backend & AI Integration:** Configured core system workflows (**Node.js/Express**) and successfully integrated multiple **AI vision detectors (DeepStack, Facebox, AWS Rekognition)** to meet production and commercial standards.
 - **Frontend & Real-time:** Delivered UI components using **Vue 3** and implemented **real-time communication** via **Socket.IO** during frontend development rotations.
 - **Achievement:** Adapted quickly to changing technical roles, gaining comprehensive **full-stack agility**. Successfully delivered a high-quality system that was officially approved by PhD. Diep Ho for commercialization and market sales.
- **Tech stack:** Vue 3, Node.js, Express, SQLite, AWS Rekognition, DeepStack, Facebox, Socket.IO, JWT.

PROJECTS

Home-delivering-food

Team size: 1 (Personal Project) | **Role:** Full-stack Developer

- **Description:** Developed a full-stack food ordering and delivery web application simulating restaurant operations with dynamic menu filtering and admin order controls.
- **Tech stack:** Vue.js, Pinia, Vue Router, PrimeVue, Express.js, MySQL, JWT.
- **Achievement:** Built secure endpoints for user login, cart, and checkout workflows. Implemented an automated order confirmation email system upon successful checkout, ensuring reliable transactional flows.
- **My lessons:** Improved practical skills in full-stack architecture, secure API development, and managing complex frontend state interactions.

Microservices E-commerce Platform

Team size: 1 (Personal Project) | **Role:** Full-stack Developer & System Architect

- **Description:** Architected and developed a scalable e-commerce platform, transitioning from a monolithic approach to a microservices ecosystem to handle complex business domains.
- **Tech stack:**
 - **Frontend:** Next.js, React 19, TypeScript, Tailwind CSS, Recharts.
 - **Backend:** Java, Spring Boot, RESTful APIs, MySQL.
- **Achievement:** Engineered independent services establishing strict boundaries for product catalog, cart, and order management. Successfully handled inter-service communication and distributed database transactions to ensure high availability and data consistency.
- **My lessons:** Addressed architectural challenges in asynchronous processing and system decoupling. Significantly strengthened my foundation in distributed systems and software architecture patterns.
